A BILL TO BE ENTITLED
AN ACT TO EXPAND MEDICAID IN NORTH CAROLINA.

Whereas, by maximizing health care coverage through Medicaid expansion, 626,000 North Carolinians would gain access to comprehensive health care coverage; and
Whereas, the COVID-19 pandemic has exposed and exacerbated challenges, barriers, and inequalities within the health care system that existed before the pandemic. A new urgency to maximizing health care access for essential and front-line workers in North Carolina is essential to the overall health of North Carolinians across the State; and
Whereas, many people who could gain coverage through Medicaid expansion are essential or front-line workers who are noted to be at elevated risk from COVID-19. These workers are continuing to provide care to some of our most vulnerable citizens in North Carolina communities; and
Whereas, North Carolina is experiencing a behavioral health crisis that has been exacerbated by the COVID-19 pandemic causing a significant increase in depression, anxiety, and opioid overdoses; and
Whereas, the data for 2021 indicates that 204,000 adults with any mental health illness (AMI) are uninsured in North Carolina. Adult prevalence of mental illness in North Carolina is estimated to be 1,469,000 people. Approximately 833,000 adults with AMI did not receive treatment. Approximately 358,000 adults experienced suicide ideation. Approximately 98,000 youth with severe major depressive episodes (MDE) are identified in the State. Around 77,000 youth with MDE are not receiving treatment in 2021. There are estimated to be 33,000 children with private health insurance that does not cover mental or emotional problems. There are approximately 544,000 adults experiencing substance use disorder in North Carolina. Approximately 343,530 adults with cognitive disabilities could not see a doctor due to cost; and
Whereas, North Carolina ranks 44th in the country for access to care, 24th in the country for the prevalence of mental illness, and 26th in the country for mental health workforce need according to the 2021 State of Mental Health in America Report; and
Whereas, Medicaid expansion has demonstrated a reduction in opioid overdoses, improvement in access to behavioral health services, increased treatment for opioid use disorder, and increased providers enrolling with Medicaid to provide substance use disorder services; and
Whereas, Medicaid expansion would strengthen our rural communities by improving access to care and the sustainability of the rural hospital workforce; and
Whereas, rural residents are 40% more likely to be uninsured and eligible for Medicaid. On average, health care access for between 7.4% to 12.8% of people residing in rural counties would gain access to comprehensive health care coverage; and

Whereas, 11 rural hospitals have closed since 2005 and many others have cut health care services, and six rural hospitals have financial risk. These hospitals serve communities of about 180,000 people in rural counties; and

Whereas, Medicaid expansion would assist with reducing health care disparities in marginalized and underserved communities in North Carolina; and

Whereas, infant mortality rate decline is greater in states that have expanded Medicaid, and there is a greater decline in the mortality rate among African American infants according to the American Journal of Public Health; and

Whereas, research has shown that Medicaid expansion has been linked to better health outcomes, including increased access to primary care, preventative health services, and medications, as well as lower out-of-pocket expenses; and

Whereas, by expanding Medicaid now, North Carolina becomes eligible for $2.4 billion in federal monies for over two years; and

Whereas, if North Carolina expands Medicaid with coverage beginning by July 1, 2021, then the State qualifies for the increased federal medical assistance percentage (FMAP) match through June 2023; and

Whereas, the 5% increase in the FMAP would layer on top of the 6.2% FMAP increase that the State is receiving for the duration of the public health emergency; Now, therefore,

The General Assembly of North Carolina enacts:

SECTION 1.(a) Section 3 of S.L. 2013-5 is repealed.

SECTION 1.(b) G.S. 108A-54.3A is amended by adding a new subdivision to read:

"(24) Individuals between the ages of 19 and 65 with modified adjusted gross incomes that are at or below one hundred thirty-three percent (133%) of the federal poverty guidelines and who are not entitled to or enrolled in Medicare benefits under Part A or Part B of Title XVIII of the federal Social Security Act."

SECTION 1.(c) The Department of Health and Human Services is directed to provide coverage for individuals under G.S. 108A-54.3A(24), as enacted under subsection (b) of this section, in a manner consistent with S.L. 2015-245, as amended.

SECTION 1.(d) The costs associated with implementing this act shall be funded with federal funds received due to the temporary increase in the federal medical assistance percentage (FMAP) under section 9814 of the American Rescue Plan Act of 2021, P.L. 117-2. When funds associated with that increase in FMAP are no longer sufficient, it is the intent of the General Assembly to impose upon hospital providers paying the supplemental assessment or base assessment under Article 7A of Chapter 108A of the General Statutes, as enacted in Section 15.1 of S.L. 2020-88, an additional assessment that will pay for the State share of the program and administrative costs associated with coverage for individuals under G.S. 108A-54.3A(24), as enacted under subsection (b) of this section.

SECTION 2. This act becomes effective July 1, 2021.
